16x Hex Nut M12

NOT INCLUDED:

Nut protector
Cable conduit

Add nut protectors, such as the **ONEPOLE PRO M12 Black Hats**, for a professional finish and a uniform appearance

Art.no: Q25015

1. This is an overview of the parts included with the Anchor Frame. Please ensure that all components are present before starting the installation

2. Place the hex nuts as shown in the image above. The top hex nut serves as the adjustment nut for leveling the pedestal, while the bottom two nuts act as locking nuts for the anchor plate

For the CC140 pedestal, use the inner holes, and for the CC160 pedestal, use the outer holes.

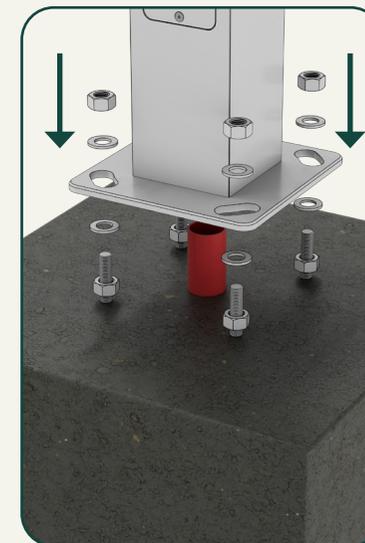

3. Place the anchor frame and cable conduit into the wet concrete. Route the cable conduit through the center hole of the anchor plate, keeping it at least **50mm** above the base of the concrete

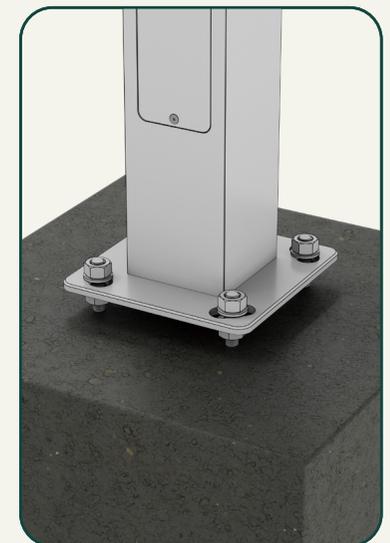

4. Once the anchor frame is in position, maintain a minimum clearance of **20mm** below the adjustment nut to allow for free movement.

Notice! Ensure that the concrete has fully hardened before proceeding

5. Install the pedestal as shown in the image above, using flat washers on both sides of the foot plate. Use flat washers that correspond to the foot plate hole dimensions

Adjust and level the pedestal using the adjustment nuts, then tighten the top nuts to the specified torque to secure the pedestal

6. When everything is done correctly the pedestal should be standing in level and be properly secured to the ground.

Add nut protectors, such as the **ONEPOLE PRO M12 Black Hats**, for a professional finish and a uniform appearance
